

Welcome to the Camilty Wind Farm Community Consultation Day

Welcome to the EDF Renewables consultation event

We are keen to share with you the updated plans for the Camilty Wind Farm.

The consented 6 turbine project, Camilty Wind Farm, is being re-designed with an increase in turbine height.

After you have read the information displays, we invite you to complete a short feedback form with your comments.

The project team are also on hand to answer questions via an appointment system.

About Us

EDF Renewables is a joint venture between EDF Renewables Group (EDF's global renewable business) and EDF Energy (EDF's UK generation business). We are one of the leading renewable energy operators and developers in the UK with an operating portfolio of 34 onshore wind farms, 2 offshore wind farms and one of the largest battery storage units in Europe. www.edf-re.uk

Forestry and Land Scotland

The Camilty Wind Farm development is on the national forests and land managed by Forestry and Land Scotland (FLS) on behalf of Scottish Ministers. EDF Renewables and FLS are working together to ensure the best outcome for the development at Camilty.

The Scottish Government continues to support generation of energy, including electricity from renewable sources as part of its strategy for improving sustainability, benefiting communities, reducing the effects of climate change and maximising financial returns from Scotland's national forests and land.

The capacity of electricity produced from wind and hydro power developments that has been installed on the land we manage had reached 1086 MW by January 2019. We continue working on existing agreements in partnership with commercial organisations to develop proposals which have achieved Planning Permission or are working through the planning process. Other sites have yet to apply for planning.
